

## Can my dog catch a cold?

Dogs can be exposed to Canine Infectious Respiratory Disease Complex which is a cluster of cold and flu-like diseases exclusive to dogs.

Dogs most affected include those that visit:

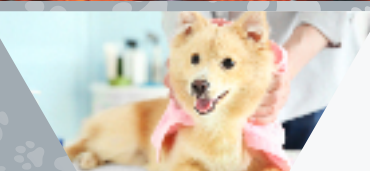

- Daycare
- Dog Parks
- Boarding and Grooming Facilities
- Veterinary Hospitals

The more social your dog is, the more likely they are to be exposed and the more important preventative care with appropriate vaccines is!

Unsure how social your pet is? See where your pet lines up below:

Ginger spends more time at doggie daycare and boarding than she does at home.

Sophie visits the groomer every 6 weeks as well as our veterinarian at least 2 times a year.

Charlie never leaves our yard and only goes to the vet once yearly.

Elanco's TruCan™ B (ORAL) Bordetella vaccine helps provide dogs with protection against one of the common canine respiratory diseases in a Fear Free formulation.

Your dog will no longer have to fear nose drops to receive the protection they need! Elanco's canine respiratory vaccine portfolio including TruCan™ B Oral, TruCan™ Ultra DAP and TruCan™ DAPPi provides your dog a broad protection against respiratory diseases.

Elanco's canine respiratory vaccine portfolio including TruCan™ B Oral, TruCan™ Ultra DAP and TruCan™ DAPPi provides your dog a broad protection against respiratory diseases. Elanco's lower volume vaccines make getting an injection less stressful for you and your dog! Ask your Fear Free Certified Veterinary Professionals today about Elanco's line of vaccines for respiratory disease.
